To whom it may concern:

Please accept my resume for consideration. During my previous tenure at Mayne Pharma from 2001-2019 I was honored to participate in the growth of what was a small privately owned laboratory services company into a full service, high quality CDMO. I have extensive experience bringing small-molecule pharmaceutical products from pre-clinical phases through to commercial validation. My career began in R&D and then transitioned to Operations and Manufacturing Science and Technology. I managed the Project Management team in addition to other operational departments. In these roles I was responsible for the development, scale-up, tech transfer, validation and launch activities and to ensure supplies were available in accordance with relevant forecasts. I was ultimately promoted to lead the contract services business unit with P&L responsibility.

I departed to pursue an entrepreneurial opportunity and am seeking to re-enter the life sciences industry with an exciting firm. I am located in the Raleigh, NC area and would prefer not to relocate however would consider given the right opportunity. I am able to travel as needed. I look forward to discussing at your convenience.
