

## Professional Objective

Clinical and data analytics pharmacy leader with excellent communication skills and experience with clinical specialists and C-suite decision makers. A problem solver and collaborator with a track record of analyzing and overseeing clinical trends/practices who desires to utilize my passion for working with health specialists and decision makers to positively impact patient outcomes through communication and education of evidenced-based medicine.

## Professional Experience

**Consultant Pharmacist, Independent Rx Long Term Care - Dayton, OH** 2018 – Present

- Conduct and document monthly medication regimen reviews (MRR) for each facility resident and advocate for patients in regards to medication therapy management
- Evaluate complex medication regimens to minimize polypharmacy and optimize quality of life in a variety of neurological, cardiovascular, and endocrine diseases
- Respond to medication information queries through evaluation, interpretation, and reporting back to healthcare professional staff
- Identify healthcare staff educational and informational needs about medications and develop, train and guide staff/prescribers to meet those needs
- Investigate and collaborate with medical and nursing directors to resolve medication-related needs or problems
- Develop mechanisms for communicating, addressing, and resolving issues related to pharmaceutical services
- Support quality assessment and assurance committees to develop procedures and evaluate pharmaceutical services
- Collaborate with the Ohio Department of Aging and coordinated the administration of Covid-19 vaccines for all facility staff and residents

**Director of Pharmacy, Atrium Medical Center – Middletown, OH** 2017 – 2018

- Planned and led all operations for the inpatient hospital pharmacy.
- Ensured strategic development of pharmacy initiatives by working with physicians and leadership.
- Managed 40-50 pharmacists and technicians while collaborating with ancillary departments and physicians on projects/initiatives
- Enabled transformation of pharmacy from 50% decentralized dispensing model to 80% decentralized operations model
- Minimized patient safety risks by optimizing the use of medication management systems aligned with medical services

**Data Insights and Analytics Pharmacist, UC Health – Cincinnati, OH** 2013 – 2017

- Lead Health System electronic health record Team in the design, implementation, analysis, and reporting of retrospective clinical and financial studies to improve cost-effective outcomes for the health system which includes four inpatient hospitals and ambulatory clinics.
- Collaborated with leadership, physicians, pharmacists, nursing, and support staff on clinical and practice management projects
- Decreased re-admissions and direct healthcare costs in COPD patients by ensuring patients were on optimal therapy and received appropriate follow up post discharge
- Reduced hospital stays by working with Colorectal Surgery department to implement an accelerated colorectal surgery pathway
- Provided documentation support for Joint Commission and CMS regulations on timely treatment of Febrile Neutropenia by working with ER department physicians and oncologists to implement treatment guidelines to treat febrile neutropenia
- Measured the ROI for the implementation of the Heart Transplant Program at UC Health
- Provided clinical and cost analysis support to P & T Committee on new product implications and throughout UC Health System

## Clinical Staff Pharmacist

- Maintained critical care and internal medicine patients; responded to cardiac arrests and traumas.
- Improved pharmaceutical care of patients in collaboration with physicians' during clinical rounds in the ICU and internal medicine floors.
- Recommended dosing and monitored therapies including antimicrobials, total parenteral nutrition (TPN), and anticoagulants
- Counseled patients on new drug therapy prior to hospital discharge
