I am a recent medical graduate from the University of Nottingham. I graduated with a degree in Medicine and Surgery as well as a Bachelors of Medical Science. I am currently working as a Junior Doctor in the NHS. I have gained and developed many transferable skills from my studies at university as well as extracurricular activities and previous employment and work experience. The main transferrable skills that I have gained that are relevant to most industries include communication from the constant communication skills exams and sessions at university as well as from my previous work as a Healthcare Support Worker. I am a great team worker having worked in different groups and teams as part of many different placements. Another key skill I have developed to a high level is problem solving both academic and general.

I have developed these skills, studied and passed my exams alongside extracurricular activities. The most noteworthy to myself is learning street dance tap and ballet as beginner with no experiences and being awarded most improved in street dance two years in a row. This shows that I am able to cope with the rigorous demands of studying and placement while maintaining some work life balance which I believe is an important trait to have to avoid burnout.
